GROW YOUR OWN ORCHIDS!

No need to wonder how a beautiful orchid grows. With your own plant you can watch it develop step by step. It's certainly worth the time and care you give it.

YOUR FIRST ORCHID PLANT!

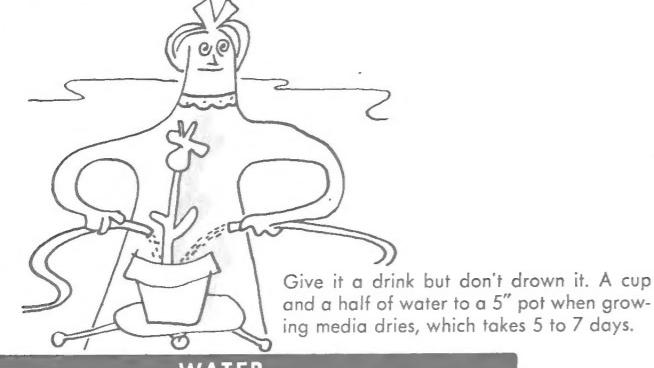

It's nice to be warm and cozy but don't overdo it. Your orchid plant feels the same. Normal room temperature suits it fine. Around 60 at night and 72 during the day.

TEMPERATURE

Orchid plants don't tan—they burn. They like lots of light but not direct sun. In most cases a southern exposure is best.

LIGHT

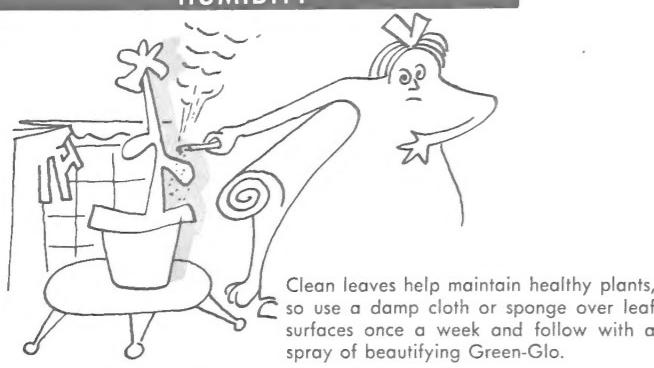

Give it a drink but don't drown it. A cup and a half of water to a 5" pot when growing media dries, which takes 5 to 7 days.

WATER

A shower is a nice place for humidity, but usually it isn't necessary to keep your plants in the bathroom. Set the pot on pebbles on a tray. Keep the water level a quarter-inch below the top of the pebbles.

HUMIDITY

Clean leaves help maintain healthy plants, so use a damp cloth or sponge over leaf surfaces once a week and follow with a spray of beautifying Green-Glo.

CLEANLINESS

Display your plants to their best advantage. Beautify them with commercially proven GREEN-GLO for cleaning and polishing plant leaves. Just spray on. Shines as it dries.
